I am working on blast in ABAQUS too. Manmohan On Thu, 09 Jun 2011 04:53:33 +0530 wrote Hello, Is there anybody who's worked with Blast Analysis on ABAQUS? I have my model which when been applied to the blast, I get very low deformation and stresses. Looks like 1/1000 of the expected results. I checked the units and they look fine.

There are three paths that you can follow in order to simulate blast actions. 1. Use the empirical model CONWEP (it's implemented in ABAQUS) in a FEA. You would need to define the equivalent TNT...

The present work deals with three dimensional nonlinear finite element (FE) analyses of underground tunnels in soil subjected to internal blast loading. The coupled Eulerian-Lagrangian (CEL) analysis tool in finite element software Abaqus/Explicit has been used for the analysis purpose.

During the analysis ABAQUS calculates values of yield stress from the current values of plastic strain. As discussed earlier, the process of lookup and interpolation is most efficient when the data are regular—when the stress-strain data are at equally spaced values of plastic strain.

We have been assigned to do non-linear analysis of an existing structure where the blast loads have increased something like 5 times. I have modelled the steel structure in abaqus as a beam model and assigned it with profiles and sections. In the structure the connections are mostly bolted connections.

Blast Loading and Blast Effects on Structures - An Overview

Problems of ballistics and blast are highly dynamic, involve complex nonlinear mechanical phenomena such as failure and plasticity, and often require the modeling of multiple physical domains (such as underwater explosions or UNDEX). System failures under these loading conditions almost always have catastrophic, if not fatal, consequences.
