Cervical cancer is a cancer arising from the cervix. It is due to the abnormal growth of cells that have the ability to invade or spread to other parts of the body. Early on, typically no symptoms are seen. Later symptoms may include abnormal vaginal bleeding, pelvic pain or pain during sexual intercourse. While bleeding after sex may not be serious, it may also indicate the presence of ...

How Can You Prevent Cervical Cancer? | HPV Vaccine Preventing, detecting, and treating pre-cancers before they become cervical cancer is the key. Regularly getting a Pap test and HPV (human papillomavirus) test is essential—the results can alert you to potential health issues caused by HPV or precancerous cells.

### **How Can You Prevent Cervical Cancer? | HPV Vaccine**

If cervical cancer is suspected, your doctor is likely to start with a thorough examination of your cervix. A special magnifying instrument (colposcope) is used to check for abnormal cells. During the colposcopic examination, your doctor is likely to take a sample of cervical cells (biopsy) for laboratory testing.
