Blasting Technique for Ground Improvement. Blasting is the use of buried explosives to cause the densification of loose cohesion less ground. The principal is that the blasting of explosives in a predetermined pattern causes liquefaction, followed by the expulsion of pore water and subsequent densification of the ground.Blast densification is being utilized for more than 80 years to densify ...

Slope testing, avalanche release, and snow stabilization are the main objectives for using explosives in avalanche blasting. To achieve these objectives, a standard charge is used that is capable of developing deto-nation pressure equal to 1 kg of TNT. Chapter 11 SPECIALIZED BLASTING TECHNIQUES
