Spot coloring uses the available colors in a scene and then composes the image so that one color stands out from the rest of the frame. Spot coloring is a technique that is used in-camera (done by the photographer). It works by placing a color against other colors that allow it to stand out in the composition.

### How to Use Spot Coloring in Your Photos

In offset printing, a spot color or solid color is any color generated by an ink (pure or mixed) that is

This technique is elsewhere referred to sometimes as "hand coloring" :-). The basic technique is to duplicate the color photograph, convert the duplicate to B&W, and paste it as a new layer on top of the color image. Add an opaque layer mask and then selectively paint transparency into the upper mask, exposing the color photograph underneath.
