Flash Guide Number Digital Photography

GN = Subject Distance from Flash Source x f/Stop. Guide numbers are based on a simple mathematical equation that states: the light output of an electronic flash is equal to the distance of the flash unit from the

Online Library Flash Guide

Number Digital Photography

subject multiplied by the lens aperture, or f/stop.

Understanding Guide Numbers | B&H Explora

The flash guide number (GN) is a measure of the distance at which the flash can illuminate a subject. The higher the guide number, the greater

Online Library Flash Guide Number Digital Photography

the distance at which the light from the flash is sufficient for optimal exposure. The formula for calculating the guide number is as follows: Guide number (GN)=distance (meters) × aperture (f-number)

Flash Level (Guide Number) - Nikon | Imaging Products

Number Digital Photography

Guide Number, usually abbreviated GN, determines power rating of flash unit that describes how powerful flash unit is and how far it can shoot. In another word, GN specifies the power of an electronic flash in a way that it can be used to determine the right f-stop to use at a particular shooting distance and ISO setting.

Flash Guide Number - The Digital SLR Guide

A flash's power is determined by its
Guide Number, with low Guide Numbers
(GN) indicating a weak or less powerful
flash than one with a high GN. For ease

Online Library Flash Guide Number Digital Photography

of comparison, most flash GNs are rated for an ISO 100 film. If you use a film with a lower ISO the GN will be lower, and, conversely, if you use a higher speed film the GN will be higher.

Flash Photography - Understanding Guide Numbers

They have a guide number of 60 meters,

Online Library Flash Guide Number Digital Photography

calculated at ISO100 and a full flash zoom setting of 200mm. The more expensive Sony units, for example, have the same guide number but are calculated at a flash zoom setting of 105mm.

Guide Numbers Explained for Manual Flash - Calculator ...

Online Library Flash Guide Number Digital Photography

The simple rule is: Guide Number = distance x fstop Number (for any proper direct flash exposure). Therefore, double GN is double distance or double fstop Number (which is 2 EV stops of exposure). So comparing as f/stops works too.

Flashes with Guide Numbers

Guide numbers are the standardized, numerical way of determining the power of a flash, with a higher guide number representing a more powerful flash. A guide number is the product of multiplying the f/stop of an exposure with a given distance, at ISO 100; or $GN = f/\text{number} \times \text{distance}$.
