### Integrated Nutrient Management For Enhancing

A field experiment was conducted to develop nutrient management strategies for sustaining soil health and sugarcane production in spring planted crop (2014–2015) and its ratoon (2015–2016) at the research farm of Sugarcane Research Institute, Shahjahanpur, UP, India. The experiment was laid out in randomized block design with three replications, implying sugarcane variety CoS 08279.

INM or IPNS has been defined by different researchers as follows: IPNS is defined as maintenance or adjustment of soil fertility and supply of plant nutrient to an optimum level for sustaining the desired crop productivity through optimization of benefit from all possible resources of plant nutrients in an integrated manner.

### Integrated Nutrient Management: Concept and Components

Nutrient cycling is the main focus of Conservation Agriculture, in which minimum soil disturbance, intercropping, crop rotations and a permanent soil cover minimize the need for chemical fertilizers. Crops with sufficient nutrients are also less susceptible to pests, thus contributing to Integrated Pest Management.

### What is Integrated Plant Nutrient Management?

Integrated nutrient management is also described as the technique of using minimum effective dose of sufficient and balanced quantities of organic and inorganic fertilizers in combination with specific microorganisms to make nutrients more available and most effective for maintaining high yields without exposing soil native nutrients and polluting the environment.

### Integrated Nutrient Management For Enhancing Nitrogen Use

Several researchers have demonstrated the beneficial effect of integrated nutrient management in mitigating the deficiency of many secondary and micronutrients. Identifying the optimum dose of integrated nutrient application is, however, required for maintaining adequate supply of nutrients for increased yield.

### The Role of Integrated Nutrient Management System for ...

Integrated nutrient management (INM) or integrated nutrient supply (INS) systems are aimed at developing the efficient use of chemical fertilizers combined with organic manures. Long-term fertilizer field experiments relating intensive cereal-based cropping systems indicate lower productivity, even with the application of recommended rates of N, P, and K fertilizers ( Mahajan et al., 2008 ).
