Support the weight of the bike on the jack or center stand, and loosen the front axle. Remove the lock nut, and then try to slide the axle out of the fork. If it comes away with little effort, the forks are in alignment. If the axle has to be pounded out, it's a safe bet the forks are slightly tweaked.

Tech Tip: Front Fork Alignment | Motorcycle Cruiser

On a dirt bike with twisted tubes, simply loosen the fork clamp and axle bolts a little, put the front wheel between your legs and move the bars so they are close to the proper position, then work the forks up and down a few times, which will align the tubes pretty near perfectly, and then tighten the clamp bolts.

Many techniques for proper triple clamp - fork alignment ...

My handlebars were slightly out of whack after my bike went over last week. It's fairly easy to rectify though - you just need to loosen the lower yokes and ...

Motorcycle Fork & Handlebar Alignment: How To Straighten ...

Once the forks are installed and the front wheel is in place between the fork legs, if you have not already done so as instructed in the article on installing the front wheel, refer to a factory service manual specific to the motorcycle you are working on for the front axle torque specification and fully tighten the axle to the proper torque specification specified.
