Proportional control, in engineering and process control, is a type of linear feedback control system in which a correction is applied to the controlled variable which is proportional to the difference between the desired value (setpoint, SP) and the measured value (process variable, PV).

A control plan starts during Product/Process Development with the identification of Critical to Quality Attributes (CTQs). The Control Plan should be a comprehensive list of all CTQ's , where you monitor and control each CTQ using a risk-based approach that accounts for the capability of the process, and the criticality of the
